Management's Discussion and Analysis

The principal business of the Company is the identification, evaluation and acquisition of exploration and evaluation properties, as well as exploration of those properties once acquired. At June 30, 2016, the Company had not yet determined whether any properties contain ore reserves that are economically recoverable. The recoverability of amounts shown for exploration and mineral properties is dependent upon the discovery of economically recoverable reserves, confirmation of the Company's interest in the underlying mineral claims, the ability of the Company to obtain the necessary financing to complete the development of and future profitable production from the properties or realizing proceeds from their disposition.

Hidden Lake Lithium Property

On February 16, 2016, the Company entered into an Agreement (the "Agreement") with DG Resource Management Ltd. ("DG Resource"), Zimtu Capital Corp. ("Zimtu") and Michael V. Under the terms of the Agreement, the Company could earn 100% interest by paying cash of \$85,000, issuing 4,000,000 common shares and completing \$500,000 in exploration expenditures as follows:

92 RESOURCES CORP.

Management's Discussion and Analysis

For three months ended June 30, 2016

- On July 18, 2016, a total of 681,667 share purchase warrants with exercise price of \$0.10 expired.
- On July 19, 2016, a total of 1,896,800 share purchase warrants with exercise price of \$0.50 expired.
- Subsequent to the three-month period ended June 30, 2016, the Company issued 1,094,000 common shares in accordance to the exercise of warrants for proceeds of \$100,400.

As at June 30, 2016, the Company had cash and cash equivalents of \$984,166 and working capital of \$974,138. Some of the factors affecting the Company's liquidity are:

- The Company will have to incur ongoing costs to maintain its properties and plans to undertake exploration programs that will consume cash.
- As disclosed in note 6 of the June 30, 2016 financial statements, the Company must make option payments and complete minimum exploration expenditures if it is to retain its properties.
- As at June 30, 2016, the Company had 6,425,827 share purchase warrants outstanding at between \$0.05 and \$0.50 per share.
- As at June 30, 2016, the Company had 1,567,000 stock options outstanding at between \$0.10 and \$0.25 per share.

As at June 30, 2016, the Company had not advanced its exploration and evaluation properties to commercial production. The Company's continuation as a going concern is dependent upon successful results from exploration activities on its mineral properties and its ability to attain profitable operations and generate cash from its operations in the foreseeable future. As at June 30, 2016, the Company has accumulated losses of \$4,856,501 since inception, and is expected to incur further losses in the development of its business. The Company will have to rely on the issuance of shares or the exercise of options and warrants to fund ongoing operations and investment. The ability of the Company to raise capital will depend on market conditions and it may not be possible for the Company to issue shares on acceptable terms or at all.

PROPOSED TRANSACTIONS

None

CRITICAL ACCOUNTING ESTIMATES

The Company makes estimates and assumptions about the future that affect the reported amounts of assets and liabilities. Estimates and judgments are continually evaluated based on historical experience and other factors, including expectations of future events that are believed to be reasonable under the circumstances. In the future, actual experience may differ from these estimates and assumptions.

The effect of a change in an accounting estimate is recognized prospectively by including it in comprehensive income in the year of the change, if the change affects that year only, or in the year of the change and future years, if the change affects both.

Information about critical judgments in applying accounting policies that have the most significant risk of causing material adjustment to the carrying amounts of assets and liabilities recognized in the financial statements within the next financial year and are discussed in the financial statements.

FINANCIAL INSTRUMENTS

The fair value of financial assets and financial liabilities at amortized cost is determined in accordance with generally accepted pricing models based on discounted cash flow analysis or using prices from observable current market transactions. The Company considers that the carrying amount of all its financial assets and financial liabilities recognized at amortized cost in the financial statements approximates their fair value due to the demand nature or short term maturity of these instruments.

- Level 1 fair value measurements are those derived from quoted prices in active markets for identical assets or liabilities.
- Level 2 fair value measurements are those derived from inputs other than quoted prices included within Level 1, that are observable either directly or indirectly.
- Level 3 fair value measurements are those derived from valuation techniques that include inputs that are not based on observable market data. As at June 30, 2016, the Company does not have any Level 3 financial instruments.

The Company's financial instruments consist of cash and cash equivalents, amounts receivable, loan receivable, trade and other payables and loans payable.

The Company's financial instruments are exposed to certain financial risks. The risk exposures and the impact on the Company's financial instruments are summarized below.

Credit Risk

Credit risk is the risk that one party to a financial instrument will cause a financial loss for the other party by failing to discharge an obligation. The Company's cash and receivables are exposed to credit risk. The Company reduces its credit risk on cash by placing these instruments with institutions of high credit worthiness.

92 RESOURCES CORP.

Management's Discussion and Analysis

For three months ended June 30, 2016

Interest Rate Risk

Interest rate risk is the risk that the fair value or future cash flows of a financial instrument will fluctuate because of changes in market interest rates. The Company considers its exposure to interest rate risk to be not significant.

Liquidity Risk

Liquidity risk is the risk that the Company will encounter difficulty in meeting obligations associated with financial liabilities. The Company's accounts payable and accrued liabilities are all current and due within 90 days of the balance sheet date. The Company ensures that it has sufficient capital to meet its short-term financial obligations.

RISKS AND UNCERTAINTIES

The more significant risks and uncertainties not discussed elsewhere in this MD&A include:

Financing Risk

The Company will need to continue raising funds to finance its operations and exploration activities. There is no certainty that the Company will be able to raise money on acceptable terms or at all.

Exploration Risk

Exploration for mineral resources involves a high degree of risk. The cost of conducting exploration programs may be substantial and the likelihood of success is difficult to assess. Few explored properties are ultimately developed into producing mines. The Company attempts to mitigate its exploration risk by maintaining a diversified portfolio that includes several different exploration prospects in a number of favorable geologic environments.

Metal Price Risk

Even if the Company's exploration programs are successful in locating economic deposits of minerals or precious metals, factors beyond the Company's control may affect the value and marketability of such deposits. Natural resource prices have wide historic fluctuations due to many factors, including inflation, currency fluctuations, interest rates, consumption trends and local and worldwide financial market conditions. The prices of such natural resources greatly affect the value of the Company and the potential value of its properties. This, in turn, greatly affects its ability to form joint ventures and the structure of any joint ventures formed.

Environmental Risk

The Company seeks to operate within environmental protection standards that meet or exceed existing requirements in the countries in which the Company operates. Present or future laws and regulations, however, may affect the Company's operations. Future environmental costs may increase due to changing requirements or costs associated with exploration and the developing, operating and closing of mines. Programs may also be delayed or prohibited in some areas. Although minimal at this time, site restoration costs are a component of exploration expenditures.
